

CLAIM LISTING:

- 
1. (Currently Amended) A liquid crystal display element comprising:  
a circuit array substrate having pixel electrodes and a resin layer interposed therebetween; a pair of substrates provided opposite to each other having an electrode on at least either of said substrates;  
a resin layer formed on at least either of said pair of substrates;  
a counter substrate having a common electrode;  
alignment films having surface energy of ranging from 51 to 60 dyn/cm to prevent an image-sticking phenomenon and white or black turbid spots, said alignment films being formed on said pixel electrodes and said common electrode surfaces of said pair of substrates respectively ; and  
a liquid crystal composition charged in a gap between said circuit array and counter substrates. pair of substrates with said alignment films provided opposite to each other.
- A1
2. (Previously Presented) A liquid crystal display element according to claim 1, wherein said resin layer is a color filter layer.
3. (Currently Cancelled) ✓
